

## **UPDATES FROM VERSION RASD1 TO VERSION RASD2**

- Added “Email Service” interface in Section 2.1.1 both in the picture and in the text explanation.
- Update of sequence diagram (Figure 36) with Email Service.
- Minor fixes of sequence diagrams.

We have noticed that the external interface “Email Service” is needed by the system for the sending of the OTP code for the manager login and for the recovery of the password. This became evident in the creation of the DD and, for this reason, we are updating the RASD.
